Trans. of Makromolekulare Chemie (Switzerland)
1959, v. 32, no. 2/3, p. 170-183.

Grignard compounds have been used for anionic
caprolactam polymerization, in order to obtain a more
uniform course. It was possible to initiate polymeri-
zation processes therewith, but they followed the same
rules observed when using sodium caprolactam. The
addition of acetic acid esters of long-chain alcohols,
however, resulted in a distinct stabilizing effect.
Acetyl caprolactam, which was used in different con-
centration ratios, had a still better effect. The re-
sulting rules regarding the dependence of the number
average degree of polymerization in equilibrium upon
